Selected paper of 10th Global Congress on Renewable Energy and Environment (ESWAE- 2021) 13-15 October 2021, Lara-Antalya, Turkey

ONLINE and FACE-TO-FACE INTERNATIONAL CONFERENCE

Message from the Editor in Chief\*

Dear reader,

It is with great delight that we present the Selected Papers of the 10th Global Congress on Renewable Energy and Environment, ESWAE, 2021. The global congress aimed to increase knowledge and awareness of new information technology for renewable energy and the environment. Based on the theme of the congress, several papers were presented. However, this publication presents the selected papers that fit into the aim of the congress.

The selected papers were presented by researchers from Turkey and the titles presented include “An assessment of situational awareness in sea navigation with a neuroscience approach”, “Exploring the most appropriate materials and methods for expanding the use of wood poles in electricity distribution networks”, “Wave analytical techniques-based fault initiation detection at middle voltage distribution feeders”, “Two-stage multi-objective renewable energy optimization,” and “Ship-to-ship tanker transfer operations and risk analysis: Probabilistic approach”.

Dear reader, we believe that the presented papers give a new insight into the debate on renewable energy resources, especially the aspect of information technology. We would therefore commend our researchers who shared their research with us, as well as our editorial and publishing team.

Dear reader, enjoy reading!!

Best regards,

Prof. Dr. Haluk Soran, Hacettepe University, Turkey (Retired)

(Editor-In-Chief).
